Dear EPA,

I have access to the 2009 version of the document entitled "NSF/ANSI 60 - 2009, Drinking Water Chemicals - Health Effects". See the attached pages.

I also have access to the 2013 version, which is available online at:  
[http://www.nsf.org/newsroom\\_pdf/NSF\\_60-13\\_-\\_watermarked.pdf](http://www.nsf.org/newsroom_pdf/NSF_60-13_-_watermarked.pdf)

Previous editions of this document were released in 1987, 1988, 1996, 1997, 1999, 2000, 2001, 2002, 2003, 2004, 2005, and 2006. See the list of edition publication dates in the attached pages.

I would be very grateful if you locate and send me any of these earlier editions. I am not looking for all of them. I am looking for the oldest version.

Specifically I am looking for the first edition which added the language now found in section A.3.2. The 2013 and 2009 versions contain A.3.2. The 2005 version appears not to contain A.3.2. I am searching for older versions to see if they contain A.3.2.

A.3.2 says:

**A.3.2 Substances regulated by USEPA or Health Canada**

If a substance is regulated under the USEPA's National Primary Drinking Water Regulations and USEPA has finalized a Maximum Contaminant level (MCL) or other means of regulation such as a treatment technique (see annex A, section A.2.18), no additional collection of toxicological data shall be required prior to performance of the risk estimation (see annex A, section A.6.1). Where Health Canada has finalized a Maximum Allowable Concentration (MAC), no additional toxicological evaluation shall be required prior to performance of the risk estimation (see annex A, section A.6.1). Annex D contains a list of regulatory values (MCL or MAC) and their corresponding SPACs. This list includes consensus

evaluation criteria for those substances that are regulated by both countries.

This document is no longer private or classified. The 2013 version is online and free to all. So I would assume the same thing applies to the earlier editions.

I suspect that the EPA may have these documents in electronic may be If possible send your response by email. Bill me what is appropriate.

I have a deadline of November 30 to respond to file an appeal with the Washington governor, so I would appreciate your attention to this.

In a letter I received from EPA in 2012, Stephanie Flaharty said that I would most likely find NSF documents through EPA's ORD in Cincinnati, so would you please forward this request to Cincinnati?

Sincerely,

James Robert Deal, Attorney
